

## CHILLWIND ENVIRONMENTAL POLICY STATEMENT

Chillwind was created out of a desire to use engineering skill to reduce man's impact on and to improve the natural environment. The company makes a positive contribution to the environment by providing services to the renewable energy industry, thus reducing the world's collective dependency on fossil fuels. However, we recognise that the activities we undertake to deliver these services carry their own environmental impact. We therefore aim to:

- Consider environmental factors when making all business decisions
- Operate from premises which are as energy efficient and environmentally benign as possible
- Reduce carbon emissions, energy use & wastage from our manufacturing and transport activities
- Minimise our use of office consumables
- Re-use and recycle materials wherever possible, whether that is steel and aluminium from mast production or paper and consumables from the office
- Endeavour to prevent pollution from any source
- Foster a high level of environmental awareness amongst staff
- Work with and encourage our clients, suppliers and sub-contractors to improve their environmental performance
- Comply with and exceed all relevant environmental legislation and guidance
- Continuously improve our performance in all the above areas
